Faculty ID:	2502-2532-2
Course Code and Title:	CSC 3215 Web Technologies
Semester:	Summer 2025-2026

Lab Practice: PHP Database, Sessions, Cookies & File Uploads

Scenario & Logic Requirements:

Develop a robust user registration and authentication system using PHP and MySQL. Create an HTML/PHP registration form that collects the following fields: Username, Password, Confirm Password, Address, NID Document (File Upload), and a Remember Me checkbox.

- Validation & Matching:** Ensure that Password and Confirm Password fields match, and inputs are sanitized.
- File Handling:** Securely upload the NID file into a designated server directory ('uploads/') with a unique name.
- Database Integration:** Store the user details (Username, hashed password, address, and uploaded file path) inside a MySQL database table named 'users' using PHP Data Objects (PDO) or MySQLi.
- Sessions & Cookies:**
 - Store logged-in user state using PHP `$_SESSION`.
 - If the "Remember Me" option is checked, set a `$_COOKIE` to remember the username for 30 days.

Task Instructions:

- Create a folder named **Lab Practice PHP**. Organize your project into: `db/` (database connection script), `uploads/` (for NID files), `register.php`, and `welcome.php`.
- Test the database entry via phpMyAdmin and submit your code link to the Git repository.
